Overview

- Web application for mobile screens
- Backend node.js
- Frontend react.js
- Unit tests and Integrations tests
- Docker containers at gitlab
- Clear documentation in english
- Data models and API commands are defined (see appendix)
- The application strives for easy, intuitive user interaction
- Below we explain each view

User types

User - can use the system

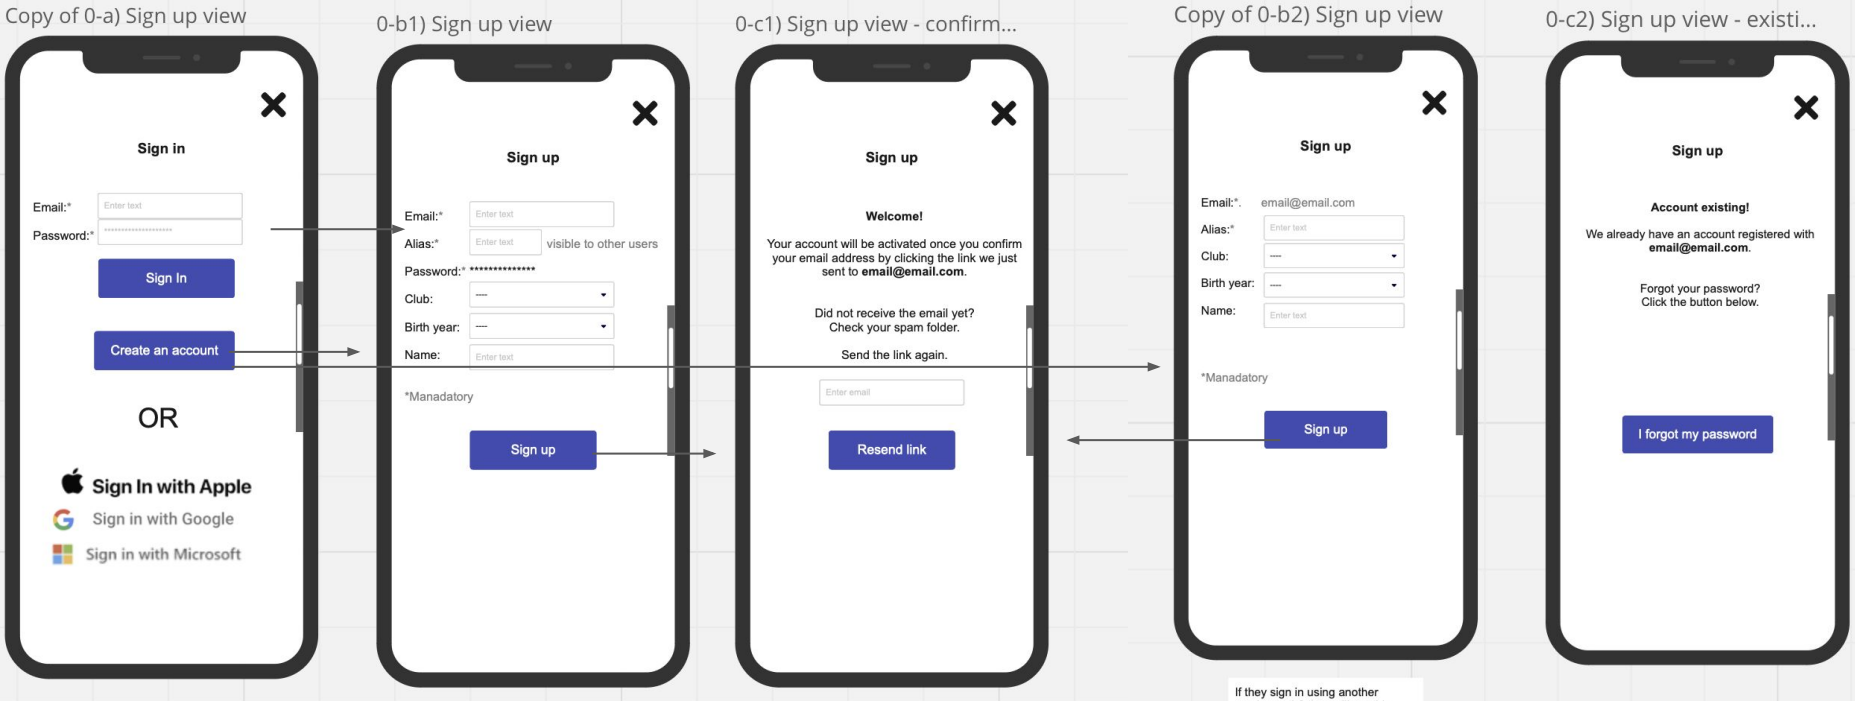
Club admin - can organize an event

System administrator - us we can maintain the system

UI Design assignment (For designer)

1. Make sure you understand the design and functionality
2. Clarify where needed
3. Suggest modifications/simplifications where beneficial
4. Use available design library (UI-kit) for design components to minimise total work Bootstrap is ok (no pixel polishing)
5. The design should reuse as much as possible to be easy to generate, build and maintain
6. Generate figma design files in a coherent design style (clean and simple design style) to enable connection to backend.

Sign up/in



If they are signed up already they land on start page screen 1) Start view

If not they go through the sign up flow o-a)

Users can do anything in the app without being signed in.Except enter the settings or actually record a score. They can test it an scan but will appear as unknown user and get a sign up button or sc

If they sign in using another service auth0 they will get this screen as email and password are not needed they only need the username.

Start view - user

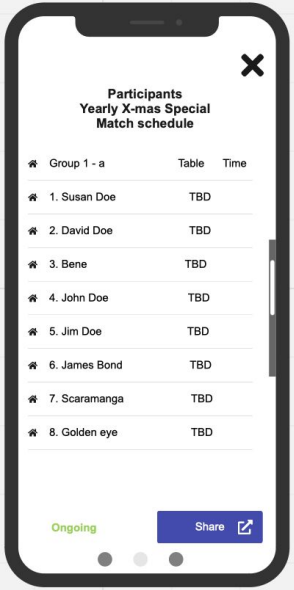
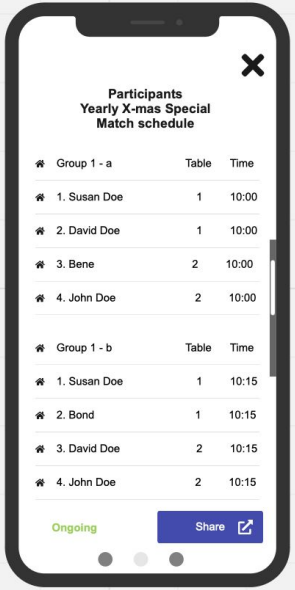
2-c) Signed-up view user 3



2-c) Detailed event and si...

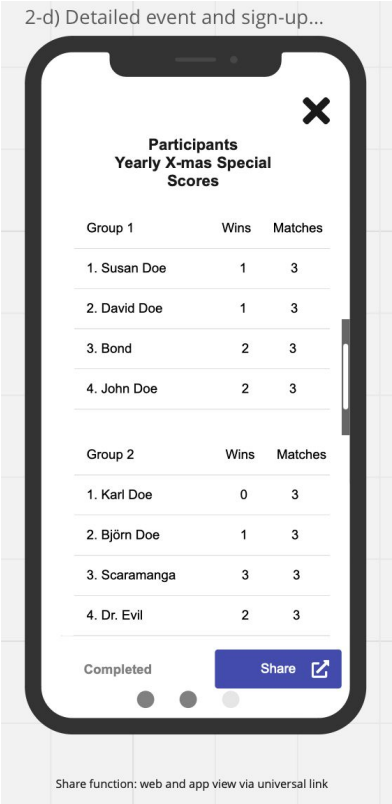


Ongoing screen available between 1 hour before first start time
and it stays on until we have all the scores.
Admin can enforce a score (i.e. when the player(s) don't enter theirs
tables will be real tables

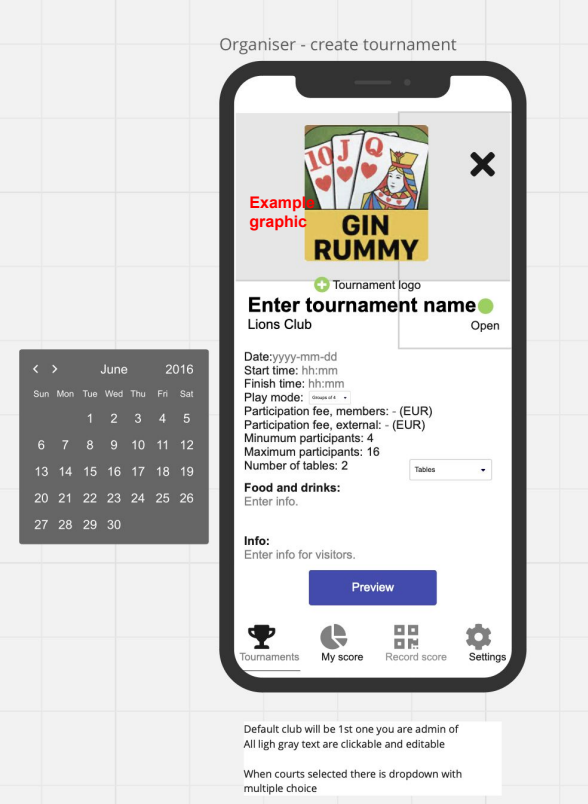
whether alias or real name being used is set via player-use_alias_or_name

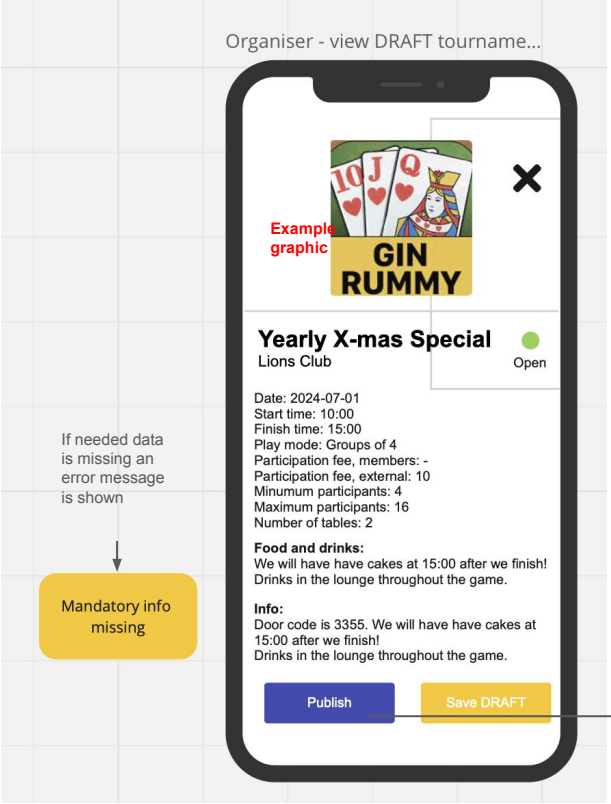
If not participating ongoing is shown in grey

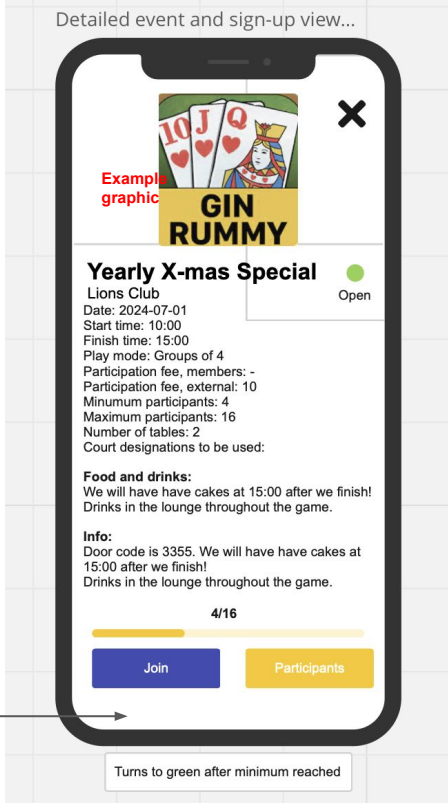
Event view for signed up user - scores



Club admin - create tournament 1

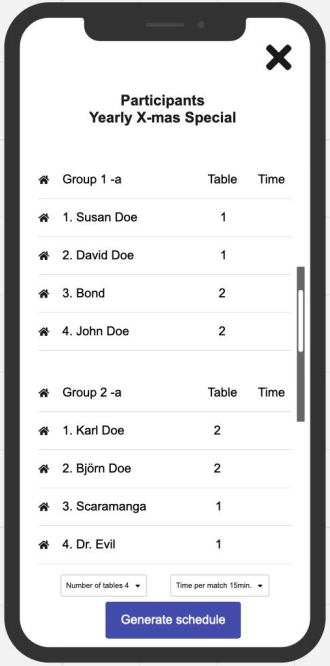






Club admin - create tournament 2

Organizer - Player allocation



Player schedules are visible to players 1 hour before the first matches begin.

Names can be dragged and dropped between groups. Based on the number of courts used games are allocated to courts and starting times suggested based on estimated match time that is selected.

Each group of 4 people play 3 matches (all play all)

If only 4 people they do it twice after having played each other once.

If 8 people they play 3 matches per group.

After that the score decides group allocation (Group 3 and 4) based on points.

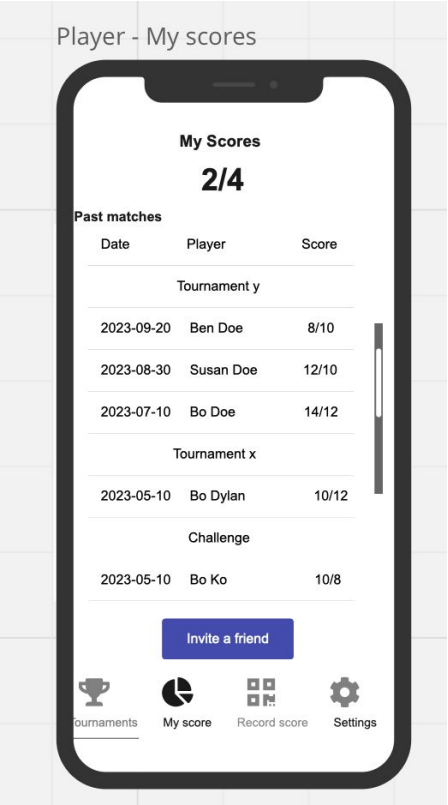
This can be done for batches of 8 players.

The number of courts defines the time table.

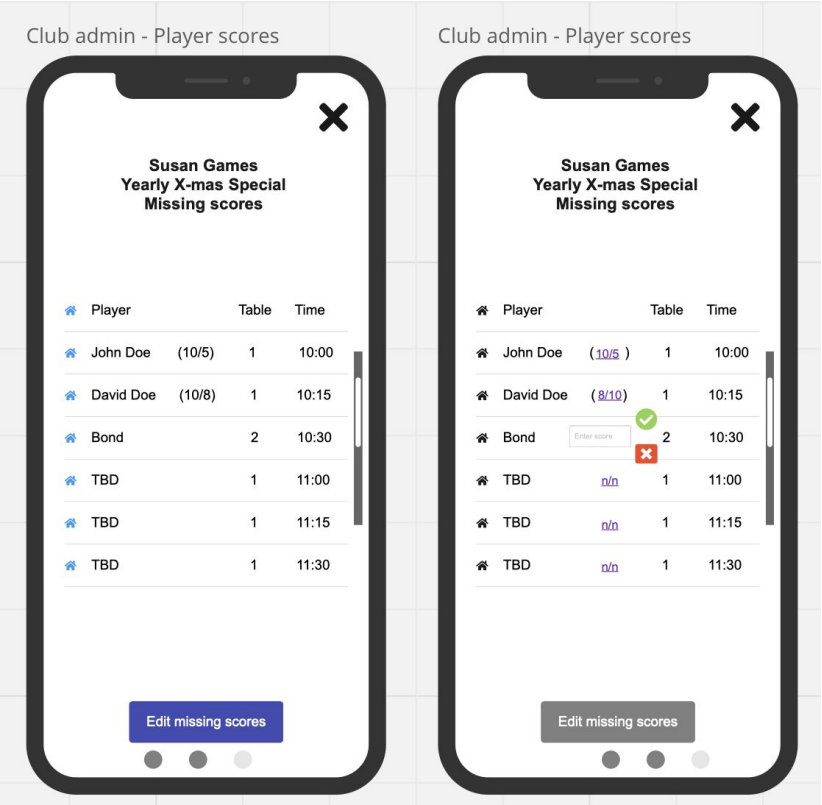
If there are an odd number of groups on group just play each other twice as mentioned above.

If a player is missing players can agree to play several times.

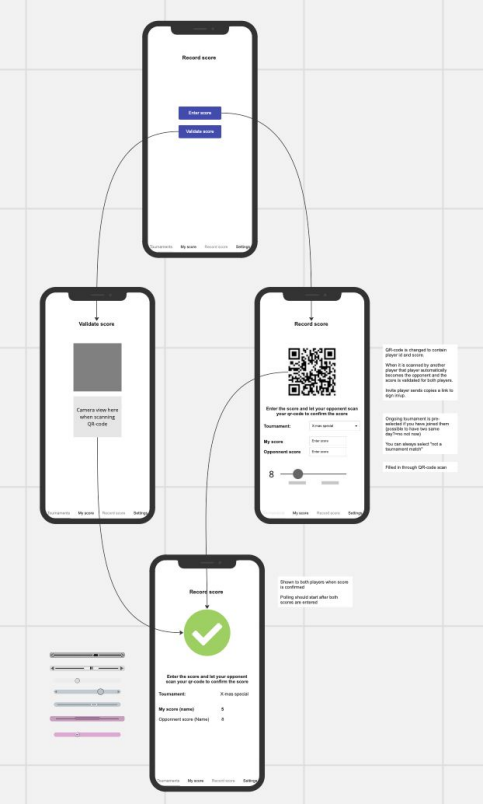
User view - my scores



Event view for club admin - scores

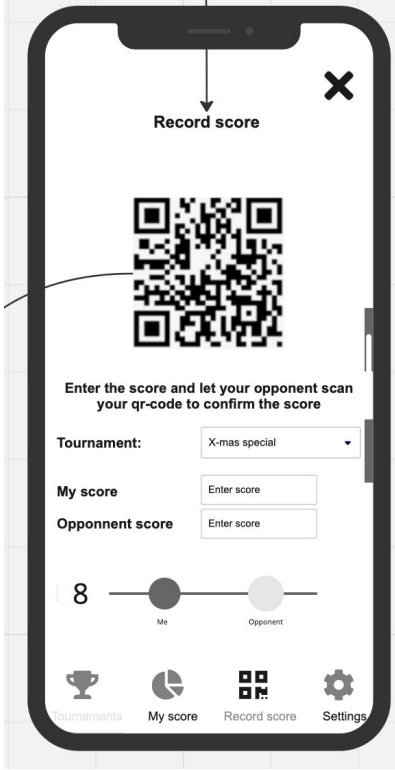


User view - add a score 1



My scores - main

My scores - scan input



QR-code is changed to contain player id and score.

When it is scanned by another player that player automatically becomes the opponent and the score is validated for both players.

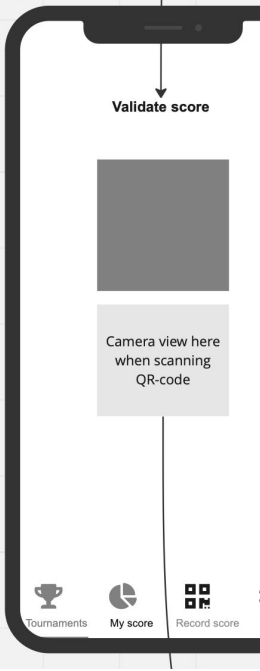
Invite player sends copies a link to sign in/up.

Ongoing tournament is pre-selected if you have joined them (possible to have two same day?=no not now)

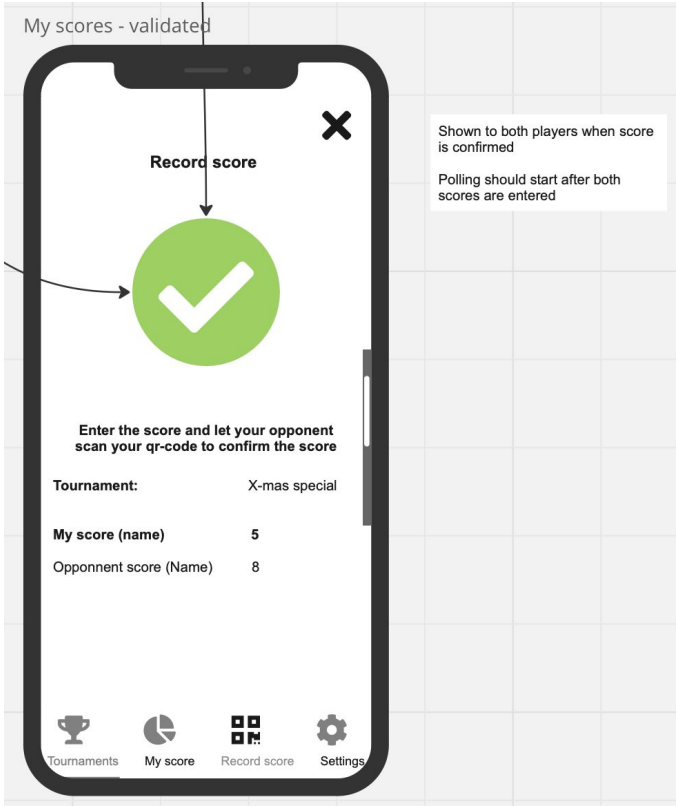
You can always select "not a tournament match"

Filled in through QR-code scan

My scores - validate



User view - add a score 2



User view - settings user
